

LUBRICATING CLOSING MECHANISM SYSTEMHELM

It is important that you perform timely maintenance on your helmet. With a system helmet it is important to make sure that the contact points for opening/closing the helmet, are lubricated with a dry lubrication (PTFE Dry spray). This ensures Smooth opening/closing of the helmet.

There are 7 contact points in total. 2 in the hinged part, 2 at the height of the cheek pads, 2 at eye level and 1 at the bottom of the helmet. These points should be sprayed lightly with a PTFE Dry spray. (M90201)

① Contact points -Hinged part

② Hinge sunvisor -Eye level

③ Contact points -Cheek cushions

④ Switch sunvisor -Bottom of the helmet
